## **REMARKS**

In response to the restriction requirement set forth in the communication, Applicant elects Group VIII, a method of identifying molecules that comprise a region that specifically binds to prominin-1. Claims 4-11 are added which correspond to the elected group.

Claim 4 specifies that the binding of prominin-1 to the molecule is by immunoassay. Support is found in the present specification at page 9, line 17.

Claim 5 is directed to embodiments wherein either the prominin-1 or the molecule are immobilized. Support is found on page 9, lines 20-21 of the present specification.

Claim 6 recites the screening method for identifying molecules that inhibit the expression and/or activity of prominin-1. Claim 11 refers to the molecules identified by the claimed method. Support is found in original claim 3 and in the specification at page 8, line 26 to page 10, line 20.

Claims 7-11 are directed to embodiments of the screening method which use a mammalian knock-out model to identify molecules inhibiting prominin-1. Support is found in the Examples of the specification (page 10, line 22 to page 16, line 9). Specifically, generation of a prominin-1 knock out mouse is found in Example 1 at page 10, line 23 to page 11, line 20.

Support for claims 9-10 is found in Example 2 of the present specification, page 11, lines 22-26.

Claims 1-2 are cancelled without prejudice or disclaimer as directed to non-elected subject matter. Applicant reserves the right to file a divisional application.
